

Clearview ECM 5.1 Highlights

Intelligent Indexing. Automatically insert index values based on key lookup values.

Index Value Validation. Data is accurate. Information worker confidence is boosted.

External Data Access. System Administrators can access index values from ODBC databases outside of Clearview, expanding the ECM reach throughout an organization.

64-Bit. Processing time is faster than ever.

SharePoint. Premium Edition supports both SharePoint 2007 & 2010.

And much more...

"One of the most interesting things about the Clearview solution is the extent to which Clearview leverages Microsoft Office SharePoint Server and the Office 2007 system – not just as a platform for delivering core ECM functionality – but also as part of the core user experience.

The integration of SharePoint Server and the Office system is pretty much seamless and delivers the power of both the SharePoint Server and Office system document management features in a very comprehensive, Microsoft-oriented user experience."

Ron Sielinski
Senior Product Manager
Microsoft Office Business Platform

Enterprise Content Management (ECM) is the digital capture, storage, and organization of paper content so organizations can manage and protect their business documents and files electronically to improve operational efficiency, enhance regulatory efforts, and reduce storage space and costs.

What Can Clearview ECM Do for You?

Built for Microsoft technology and application environments, Clearview delivers robust ECM functionality with elegant simplicity. With Clearview, your organization will regain control over critical business information and improve the quality of business decisions and workplace productivity. It's a win-win solution.

EXTEND ECM FUNCTIONALITY TO MICROSOFT SHAREPOINT

Clearview ECM enables organizations to unify disparate content repositories such as multiple Microsoft SharePoint sites into a collective system. Using logical business rules, content is intelligently organized into iFolders™, providing a comprehensive view into customer account, supplier, patient, or other specific categories of information that span the available repositories in an enterprise.

MAKE INFORMATION WORKERS HAPPY

Clearview delivers a revolutionary Client experience that even the most casual ECM information worker in your organization will readily adopt.

The Clearview IRISS desktop gadget allows information workers to instantly access their allowed content and add business information quickly and easily right from the desktop. With elegant drag-and-drop actions, users can quickly retrieve business content and files directly from their line-of-business applications without programmatic interfaces. Additionally, users can drop desktop documents, email, and other business content onto the IRISS desktop gadget to be stored and managed in the Clearview ECM domain.

In the Clearview Client, power users can organize and access content the same way that they would organize and access paper-based documents by using My Work Folders or My File Cabinet. User-friendly visual indicators let information workers quickly identify which documents are required and which documents are compliant.

ELIMINATE AUDIT AND EXAMINATION HEADACHES

The advanced audit and tracking capabilities available in Clearview ECM are designed for today's compliance and regulatory-sensitive business world. Every system and user operation can be audited and you'll even be alerted to missing documents in files so that you can take corrective action. If that weren't enough, tracking and monitoring reports that require sign-off can be efficiently reviewed and recorded electronically, providing unparalleled levels of evidentiary records to support operational soundness.
