

How Clearview Complements Microsoft SharePoint

extending ECM to SharePoint

Clearview ECM 5.0 Highlights

Business Process Management

(Workflow). Organizations can automate repetitive business processes for increased productivity and business intelligence.

Intelligent Indexing. Automatically insert index values based on key lookup values.

Index Value Validation. Data is accurate. Information worker confidence is boosted.

External Data Access. System Administrators can access index values from ODBC databases outside of Clearview, expanding the ECM reach throughout an organization.

64-Bit. Processing time is faster than ever.

And much more...

"One of the most interesting things about the Clearview solution is the extent to which Clearview leverages Microsoft Office SharePoint Server (MOSS) and the Office 2007 system—not just as a platform for delivering core ECM functionality—but also as part of the core user experience.

The integration of MOSS and the Office system is pretty much seamless and delivers the power of both the MOSS and Office system document management features in a very comprehensive, Microsoft-oriented user experience."

Ron Sielinski
Senior Product Manager
Microsoft Office Business Platform

Microsoft SharePoint has enjoyed rapid growth and success as the portal and collaboration platform for Microsoft, and with the release of Microsoft Office SharePoint Server, Microsoft enhanced the collaborative functionality to now include core content management services. While SharePoint delivers strong Document Management, Email Management, Forms Management, and Web Content Management functionality for the Microsoft application environment, Microsoft turns to its strategic partners, like Clearview, to deliver additional content competencies that enable SharePoint to become the platform for a full, enterprise-class content solution.

Clearview extends and completes the core Enterprise Content Management (ECM) capabilities provided by SharePoint with enterprise-class document imaging and high-value content services to deliver an unprecedented ECM solution built exclusively for the Microsoft technology environment.

EFFICIENT HIGH-VOLUME DOCUMENT IMAGING AND BUSINESS APPLICATION REPORT MANAGEMENT (COLD)

Clearview extends core ECM functionality in SharePoint with transactional document imaging and enterprise report management in a highly optimized and efficient architecture designed to mitigate any unnecessary burdens placed upon the native SharePoint repository. This advanced technique enables organizations to confidently introduce Document Imaging and Report Management—two highly strategic components of an ECM solution since more than 70 percent of business enterprise content is composed of paper documents and business application (computer-generated) output.

CONTENT REPOSITORY (SITE COLLECTION) FEDERATION AND AGGREGATION WITH UNIFIED CONTENT SERVICES

Clearview is the first ECM solution to introduce content federation and aggregation across a multi-repository environment to the Microsoft-centric ECM market. The innovative Clearview Virtual ECM Domain enables multiple SharePoint sites and document libraries, as well as legacy ECM vendor repositories to be holistically unified in the Clearview virtual ECM repository. Content is then easily and seamlessly accessed from any Clearview client interface. Additionally, Clearview can apply consistent content policy management, advanced business content lifecycles, and additional content services to any content object within the Clearview Virtual ECM Domain.

How Clearview Complements Microsoft SharePoint

extending ECM to SharePoint

INTELLIGENT CONTENT ORGANIZATION AND COMPLIANCE MONITORING

Clearview iFolder™ (Intelligent Folder) eliminates one of the most common pitfalls of legacy ECM solutions—misfiled or misplaced content within an incorrect folder. Clearview removes content organization from the hands of information workers and instead uses business rules—metadata or indexes that describe the content to the Clearview system—for organizing content across the Virtual Domain.

Content that is physically located in multiple repositories and Microsoft SharePoint sites is virtually combined into iFolders to provide easy access to information for customers, patients, policies, projects, or any other business entity.

Clearview iFolders contain business rules designed for today's compliance and governance world that enable content to be defined as "required" items. When a folder is accessed, user alerts are provided to highlight missing content in the folder. Additionally, Clearview provides a system-generated audit report that provides a single, comprehensive snapshot of all iFolders that are missing any required content items, along with an inventory listing of the specific content items that are causing a business exception condition in the folder.

INTUITIVE, MICROSOFT-FAMILIAR, AND CONTENT-CENTRIC USER INTERFACES

For content-specific applications and business processing, Clearview provides rich, Office 2007 compliant Windows desktop clients as well as advanced, AJAX/ASP.Net based browser clients.

These user interfaces fully embrace the Microsoft user experience, while delivering rich, content-centric user environments required to support transactional content processing applications. Of special note is the Clearview IRISS desktop gadget, providing the world's first Windows Vista inspired ECM gadget, designed to create a unique user experience for basic content services.

COMPLETE ECM WITH SHAREPOINT WITHOUT FUNCTIONAL REDUNDANCY

To provide an organization with a complete ECM functional suite, most legacy ECM products have taken a co-existence or content migration approach for how they integrate with SharePoint. This creates functional redundancy and inconsistent processing experiences for Document Management, Email Management, Forms Management, and Web Content Management with SharePoint's native ECM capabilities.

Clearview is the only ECM suite in the market that uses SharePoint's native capabilities as its only service component for Document Management, Email Management, Forms Management, and Web Content Management. This provides a single, consistent user experience across the enterprise—a key factor in how Clearview extends SharePoint's core ECM services.

About Clearview Software

Clearview is the premier innovator of a SharePoint-based ECM solution designed for today's demanding business world.

Our leadership team combines years of industry experience with the latest Microsoft technology architecture and innovation to bring to market a new standard of excellence for Solutions, Services, and Customer Care.
